Alpine 's Repair Tools Provide Designers the Power to Design Their own Repairs

Glenview, IL - July 26, 2019 - Alpine's Repair Tools give designers the power to rapidly design many of their repairs inhouse using Alpine's IntelliVIEW software. Repair Tools gives the designer the tools needed to design repairs for commonly occurring field issues.

"Repair Tools help our customers save time and money", explains Abdur Khan, an Engineer with Alpine. "Customer satisfaction is improved, as they get the answers they need quickly. In addition, with the customer's preliminary design our team is able to quickly engineer the repairs and get the repair jobs back to our customer the same day."

Positive Customer Impact

Component Manufactures can now use materials commonly found on job sites and by inputting them into Alpine's software. These materials include plywood and OSB gussets used to either reinforce or plate joints that may be damaged or missing. Scabs can be used to repair broken or cut webs and chords. Many of Alpine's power users are able to take repairs a step further using gussets and Trulox plates to change web reconfigurations, make profile changes and field splice trusses.

Because time is of the essence, many designers use the Repair Tools to provide alternative repair solutions for the framers in the field in real time. Because the preliminary designs are done by the Component Manufacture using Alpine's proprietary tools, these repairs are treated like any other customer submitted truss design and returned to the customer at no additional cost.

Alpine customers can save time and money by using the Repair Tools feature found in Alpine's IntelliVIEW software. For more information in this essential tool, contact your Alpine representative.

About Alpine

Recognized for its engineering excellence, productivity-enhancing software and equipment solutions, and the industry's best service, Alpine is a leading provider of building component

software, metal connector products and equipment to component manufacturers. Since 1966, the company has partnered closely with customers to enhance their business and productivity. Alpine is also a leader in delivering software solutions that increase homebuilder productivity and profitability. The company is a division of Illinois Tool Works Inc., a Fortune 200 global diversified manufacturer. For additional information, visit, visit www.alpineitw.com.
