

eShop

Plant management software made easy.

Monitor crew efficiency, eliminate bottlenecks, and seize opportunities.

Alpine’s plant management software, eShop, includes new web-based shop station that eliminates the need to install multiple applications at each manual location. It significantly reduces the time needed to add new stations or install software updates. When a new station is added and customized in the eShop Resource Manager, it is automatically available at the designated plant location. eShop installations and updates are completed for all manual stations by updating one single address. This applies to truss and wall operations, regardless of their physical location in the plant.

These new shop stations pull dimensions and annotations directly from the IntelliVIEW® Software, ensuring the production team automatically sees critical notes and dimensions from designers for more efficient and accurate production. Easy-to-use custom dimensions provide shop employees access to the information they need to keep working. Utilizing the latest technologies, eShop WebClient delivers a robust, sustainable solution for the rapid deployment of new features, accessible by a wide variate of devices in the shop.

Results Driven

Easy Integration

Integrates with all Alpine® and select third-party equipment to optimize the data collection process.

Live Updates

See every item moving through the plant and analyze historical data to understand trends and drive efficiency.

Ease of a Single System

Manage roof truss, floor truss, and wall panel production activity on one platform – no need to install and train on multiple systems.

Improve manufacturing efficiency and maximize shop employee productivity.

Access Reliable Data with Ease and in Real-Time

Visualize plant activity with real-time production data. Get insight through customized reports and send data directly to other stations. eShop seamlessly integrates into your current process for in-depth tracking on who, what, and timing across operations.

Measure and Improve Productivity

Understand labor input to maximize efficiency and improve estimating. You can monitor crew efficiency, redirect workflow easily, and solve problems in real-time. iCommand® and the IntelliVIEW® Suite quickly share error-free data between users.

Customize Screens for Effective Multitasking

Customizable screens ensure that you view only what you need – when you need it. Compare and contrast current workflow performance to historical production data to ensure you are maximizing output.

eShop displays live plant information for production stations in an easy-to-understand format

Please contact your Alpine® Sales Representative for a demo or more information.

FEATURES

Calculate actual labor, equipment usage, and material cost associated with every component produced in the plant to provide more accurate costing.

Get closer to becoming a paperless plant by reducing paper usage with digital displays of cutting and assembly data for shop employees.

Track every piece, plate, and component moving through the plant with detailed production information logged in real-time.

Seamless integration with automated Alpine® equipment and select third-party machines automatically report detailed production information to the database, resulting in accurate production metrics with no disruptions.

View Plant At-A Glance overview, showing live action at each station and to help manage all shop activity.

Keep your plant running smoothly with on-the-fly adjustments available on every station.

eShop Panels is fully integrated with the Truss Production Management System and iPanel Design Software.
