

iPanel

Design wall layouts, panelize, break, stack & build.

Industry leading panel creation by design.

iPanel, a valuable IntelliVIEW® app, is a robust panel design tool for component manufacturers. iPanel manages all the information needed to design, estimate, manufacture, and install wall panels. It contains a complete set of tools to create, detail, review, and change panels easily. An easy-to-use graphical user interface allows designers to quickly add or modify virtually any panel framing condition. It provides confidence and incredible timesaving when creating a complete layout, material take-off, and accurate, flexible costing tools, along with an intuitive set of assembly drawings.

Alpine's software integration is an industry leader allowing the panel and truss designers to share layout information from iModel to iPanel and back with no extra steps required. eShop Panels finalizes a valuable information loop which allows users to seamlessly integrate the design phase with day-to-day shop production.

Panel Creation Simplified

Power Edit: Review, Identify, and Edit

- Simplifies the panel review process.
- Allows designers to visually identify specific wall properties and apply modifications efficiently.

Sheathing Tools

- Create panels with specific sheathing specs.
- Modify sheathing specs for walls and panels.
- Select specific sheathing sizes for walls and panels.
- Trim and splice sheathing.

Frame buildings quickly, per builder specs, without significant manual effort.

Complete Set of Tools

Panel input workflow optimizes efficiency with a complete set of tools that enable designers to detail panels in plan and elevation views.

Easily Create and Edit Openings

The creation of openings is intuitive; a rough opening can be framed according to user specifications for different conditions and levels.

iPanel with STITCHER®

Helps panel designers save up to 75% of their input time for walls and openings.

Reviews Made Simple

Design changes can be reviewed and applied rapidly, saving time, and eliminating errors and back charges.

User-Friendly

Intuitive creation of assemblies and sub-assemblies.

Review and edit wall, panel, and opening properties with Power Edit

Manage openings per level, project, or builder with the Openings Manager

Break panels with intuitive and comprehensive UI

FEATURES

Panel input workflow optimizes designer efficiency.

New sheathing tools manipulate and apply sheathing on panels easily.

Version History ensures dynamic regeneration of panels while maintaining previous modifications.

Panel Design, Break, and Review allows designers to divide a wall in multiple panels. Create and merge panels, modify openings and subcomponents while reviewing the wall with high precision.

An enhanced Wall Viewer to quickly review wall design and integrity.

Conveniently manage fabrication rules and openings from a central location using the iCommand® security system.

Openings and framing rules are shared among different jobs or projects with ease.

Predefined library to simplify block framing, copying, and editing.

New, easy-to-use padding tool to help create a gap between interconnected walls while maintaining the junction's integrity.
