

iCommand®

Your management hub.

Design, build, and manage easily from one workspace.

IntelliVIEW Suite's management hub, iCommand®, centralizes your project and job information so you can easily manage a project's rough framing elements from quote to delivery - including roof and floor trusses, wall panels, solid sawn, Engineered Wood Products (EWP), sheathing, and more.

iCommand connects your business, design, and production information for any job regardless of style or size, all in one workspace.

Your workflow, your way. With an easy-to-use configurable workspace, iCommand lets you customize your workflows and user experience to support your business from initial quotes, orders, pricing options, scheduling, to-do lists, reporting, and invoicing. It also carries through the design stage (including truss layout), engineering, panel framing, production, and delivery tracking.

Empowering Your Business

Live Data

Accurate, real-time information allowing you to design, build, and manage your business in one customizable workspace.

IntelliSheets

New, improved tool to create job lists, track progress, and share live reports easily with different users.

Gauge lead time, profitability, and efficiency in every step of your workflow.

Manage Your Business Workflow Efficiently from One Location

Connect your business, design, and manufacturing information into one customizable workspace to help your company run smoothly. No need to use external software or tracking methods.

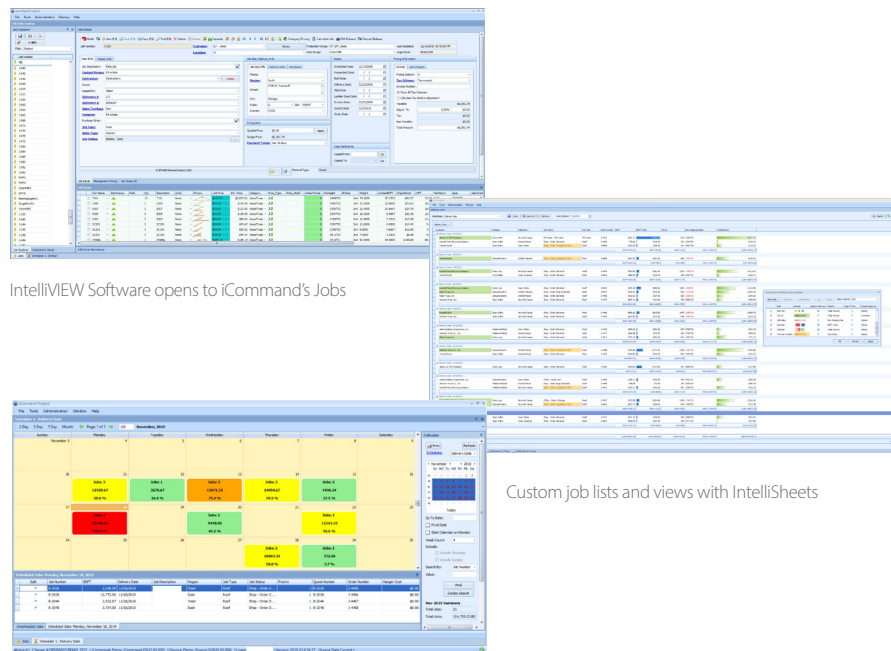

Customize the Application to Suit Your Needs

Customizable workflow adapts to the specific needs of your business, including key dates, job statuses, and pricing methods. This allows you to operate your business your way while tracking relevant information easily.

iCommand Fully Integrates with the IntelliVIEW® Suite

All the data is kept up to date automatically, which eliminates extra time to refresh or import/export data and reduces the frequency of errors.

iCommand's design supports your people, data, and workflow on your projects from quote to delivery – your way.

iCommand's Scheduler

FEATURES

Accurate, real-time information from IntelliVIEW's iDesign, iModel, iPanel, eShop, and more, all in one place.

Customizable workplaces including windows, required fields, tab order, date defaults, field synchronization, and hotkeys.

Schedule jobs and deliveries with ease using live data. Check dependencies, e.g., production schedule against design schedule.

Accurate reporting delivers the information you need to run your business: material forecast, customer sales volume, designer productivity, as well as invoice and shipping tickets.

Create customizable job lists to better organize your data: add/remove columns, filter, group, summarize, or search information quickly.

Assign a Pricing Category to each customer. Hold price on items or categories when adjusting at a higher level. Save, manage, and re-run engineered trusses to Price Books for non-designer use.

iSource is the inventory management system that keeps you on target.

Quote-to-order tracking helps maintain individual quotes, orders, and the actual cost to quoted price break downs.

Get instant access to trusted directions with Google Maps. Autofill an address by zip code, city, county, and state.

Powerful search capabilities to track down the most critical data at any time.

Define data unique to your company using custom fields with formulas in job, item, and customer windows.
