

IntelliVIEW® Suite & iStruct Integration

Enhanced EWP Layout & Engineering Capabilities

The Power of Integrated Performance

Alpine's IntelliVIEW® Suite integrated with Calculated Structured Designs' iStruct® offers component manufacturers comprehensive Engineered Wood Products (EWP) capabilities. Users can seamlessly exchange information between the platforms to complete EWP layout and engineering, without redrawing layouts or manually consolidating order details.

Layouts are quickly exported from the IntelliVIEW Suite into iStruct, eliminating the need to re-enter walls, planes, trusses, and reactions. Once the EWP members are engineered in iStruct, the finished material information is imported into iCommand®—IntelliVIEW Suite's management hub. The powerful integration eliminates time spent keying each piece of finished EWP material into iCommand, while ensuring all inventory items are associated with the right job.

The simple configuration ensures easy transfer of files. JSON files can be imported/exported for layout transfer with no additional setup involved. iCommand Core API and basic iStruct inventory installation ensures seamless exchange of quote/order information.

Please contact your Alpine® Sales Representative for a demo or more information.

EWP Capabilities

Save Time & Effort

Eliminate double entry of common data & manual input of information.

Seamless Integration

Efficiently complete EWP layout & engineering with automatic transfer of data & increased accuracy.

Easy Configuration

Avoid tedious setup. Easily transfer layout and order details with minimal installations.

iStruct Suite

An application suite of essential tools to aid the design, specification, and delivery of structural products.
