

IntelliVIEW® Suite

Max production. Quote to ship.

See. Build. Manage. All according to plan.

IntelliVIEW® is a fully integrated software suite for the design and layout of a building's framing components—including roof and floor trusses, wall panels, solid sawn, Engineered Wood Products (EWP), sheathing, and ancillary products.

Get the industry's most complete design analysis, cost information, and bill of materials to increase your profits by reducing plate and lumber use.

Automatically add optimized designs to the Component Catalog for use in future jobs. Easily search the truss catalog, review matches, and automatically load them to the job to save time and simplify workload.

Customize database screens to make sharing and tracking information easy. Make changes anywhere in the software suite with real-time updates. More control means more throughput and higher productivity across the plant.

IntelliVIEW Suite Apps

iCommand®

Manage projects, customers, materials, and pricing.

iModel

Design truss layouts and profiles.

iPanel

Design wall layouts, panelize, break, stack, and build.

iDesign

Optimize material usage and engineer trusses.

iSource

Manage material use and inventory.

Make your business more competitive and profitable with the IntelliVIEW® Suite.

Maximize Designer Efficiency

Frame projects faster with flexible conditions and intuitive workflows.

Reduce Material Costs

Engineer trusses while minimizing lumber and plate costs. Track all pieces, plates, and labor for bidding and invoicing with the software's integrated platform.

Streamline Your Quote

IntelliVIEW Suite with STITCHER® drastically reduces wall and opening input time up to 75%, making bidding and design more efficient.

Built-in Continuous Improvement

Alpine® is dedicated to delivering the most competitive software offering for component manufacturers, constantly striving to improve the IntelliVIEW® Suite.

The entire design process – full circle.

25 SERIES FEATURES

Seamless Data Exchange

IFC capabilities to support coordination between architectural models and component designs across platforms.

Property Palette

Optimized interface to display and modify object properties, providing centralized control, instant reflection of changes, and enhanced productivity.

New EWP Capabilities

Design tools for Engineered Wood Products (EWP) and dynamic framing modification.

IntelliVIEW Paperspace Tool

Now with templates for large layouts, linked schedules, and blocks with drawings to streamline documentation.

Load Areas Tool

Apply new load types simultaneously across a region, enhancing usability by loading multiple trusses.

Engineering Performance

Enhancements to support ASCE 7-22 requirements for more resilient, efficient designs.

Enhanced Panel Stacker

Use both on and offline to allow for uninterrupted productivity and continuous workflows.

DWG Performance

Optimized performance through smaller file (.lay) sizes.
